# Clue
Webforms

December 2020

Webforms

Create custom public webforms to capture data and submit securely into Clue via the API.

The Clue Gateway acts as a proxy to the Clue API, adding validation, authentication and field mapping information.

It is possible to have multiple webforms but each webform can only submit to a single register.
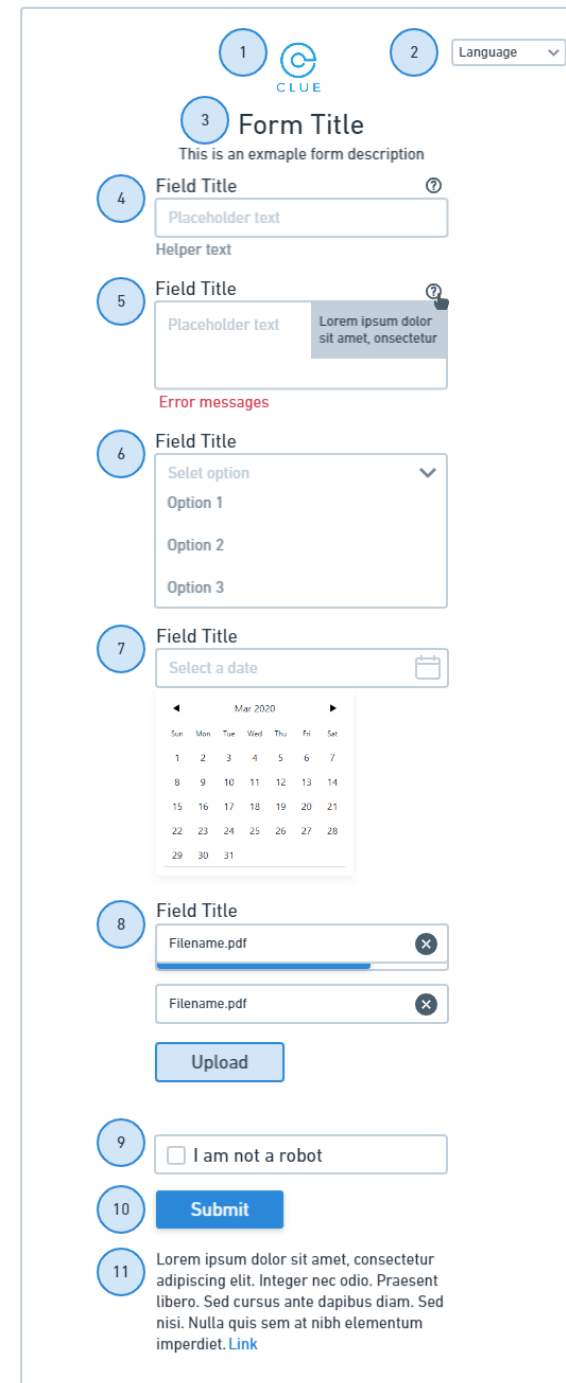

Options

Below is a list of the options available to build a webform, with explanations in the diagram opposite:

1 Logo
2 Language switcher
3 Form title and description
4 Single-line input field
5 Multi-line input field
6 Dropdown
7 Date picker
8 File upload
9 Captcha (Spam prevention)
10 Submit button
11 Paragraph (can include links)

Any field can be set as Required and has support for a Title, Placeholder, Helper text, Tooltip and Error Message. We also have support for Conditional fields, for example, each option in a dropdown could display a different field.
